According to UNESCO "The site of the Dolomites comprises a mountain range in the northern Italian Alps, numbering 18 peaks which rise to above 3,000 metres and cover 141,903 ha. It features some of the most beautiful mountain landscapes anywhere, with vertical walls, sheer cliffs and a high density of narrow, deep and long valleys. A serial property of nine areas that present a diversity of spectacular landscapes of international significance for geomorphology marked by steeples, pinnacles and rock walls, the site also contains glacial landforms and karst systems."

Fig. 4 - S1 (29.08.2018) - Ascending view in vv,vh,ndi[vh,vv] colour composite - Radar highlights the relief of the Dolomite range.

ESA's Pangaea mission uses Bletterbach canyon, lying within Dolomites, as training field.

Pangaea project also prepares exploration of Mars by sending ESA teams in other terrains covered in previous stories such as [Nördlinger Ries crater](#) in Germany and [Lanzarote Island](#) desert landscape in Canaries Archipelago, Spain.
